SymphonyThemes

ST Alphorn Quick Guide

Thank you very much for choosing ST Alphorn as your template. This document will present these new features which are only available in Alphorn. You may consult another PDF file, *SymphonyThemes_Documents.pdf* in this package to see other guides for ST themes in general and *Business_Druplal_ Dnowledge_Base.pdf* to start your website.

1. Installing

This theme is a sub theme of fusion theme, so you first download fusion theme at http://drupal.org/project/fusion. and then extract Alphorn package in fusion folder. To use all features of Alphorn theme and our full site package, please go to http://www.symphonythemes.com/drupal-theme/alphorn to download full site package. With few instalation steps, you will have a new site which similar Alphorn demo site.

1.1 Installing a new theme is straightforward:

1. Download a new theme package and fusion theme.
2. Read any README or INSTALL files in the package to find out if there are any special steps needed for this theme.
3. Upload the contents of the theme package to a new directory in the themes directory in your Drupal site (/sites/all/themes/fusion/alphorn)
4. Click administer » themes and enable the new theme (Drupal will auto-detect its presence).
5. Edit your user preferences and select the new theme. If you want it to be the default theme for all users, check the default box in the themes administration page.

## 1.2 Installing install profile package:

In all our theme packages, we have the fullsize package file. When you install our full size package, you'll have the new site look exactly like our demo site. Follow the steps below to install:

- **Step 1:** Download the full_size_package.zip file.
- **Step 2:** Extract and upload it in public_html folder of your account. You can do that through an FTP client like FileZilla or via cPanel -> File Manager -> Upload file(s). This way, after the installation is completed, the script will appear once your write something like http://yourdomainname.com in your web browser. Or you can create a subfolder there and upload the file in it. The Drupal installation will be available at: http://yourdomainname.com/subfolder.
- **Step 3:** Create a MySQL database for Drupal.
- **Step 4**: Navigate to the URL of your Drupal site to run the installation (for example http://yourdomainname.com/)
- **Step 5:** Copy the /public_html/drupal_installation_folder/sites/default/default.settings.php file to /public_html/drupal_installation_folder/sites/default/settings.php.
- **Step 6:** Enter the database details for the database which you have created in Step 3. Click on the "Save configuration" button to continue.
- **Step 7:** The installation procedure is finished. Alter back the file permissions for the settings.php file and enter the site information along with the admin account's details. Click on the **Save and Continue** button.

- **Step 8:** Well done! The installation is completed and you can proceed to your web site.
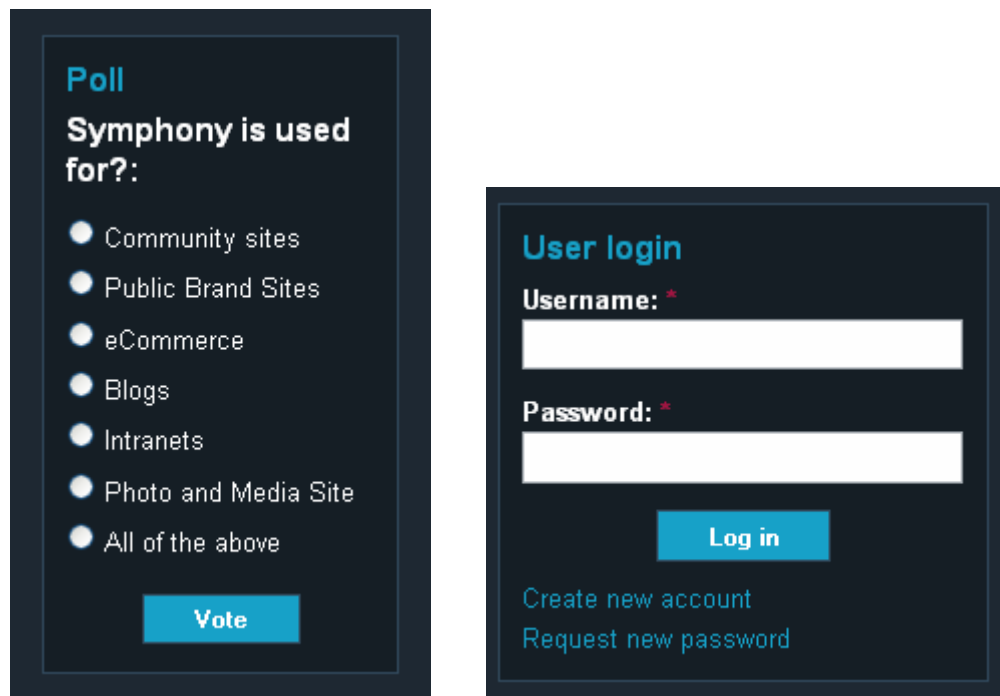

## *2. How to built blocks in Alphorn theme?*
